BENEFITS OF 365 DATA CENTERS' CLOUD HOSTING

- ▶ **Flexibility & Scalability** – Scale up or down as your business requirements change.

- ▶ **Disaster Recovery & Business Continuance** – Ensure your business runs uninterrupted, no matter the circumstances.

- ▶ **Automatic Updates** – Regular software and security updates done for you.

- ▶ **Access Anytime** – Get more done, faster, by editing and sharing documents anytime, from anywhere.

- ▶ **Reduce Your Capital Expense** – Lease only what you need, while setup, configuration, and management is done offsite.

- ▶ **Increase Security** – Store sensitive data in the cloud, not on employee devices.

Virtual Servers

Virtualize and move your IT infrastructure into the cloud to gain the power, cost efficiencies, and features of a public cloud, but with the security and performance of a dedicated environment.

Enhance agility, reduce capital and operating expenses, and improve data security, network availability, and application performance.

Virtual Private Data Center

Addresses the demands of a new or growing business by providing guaranteed computing resources and on-demand scalability.

Completely virtualize your entire infrastructure–including applications, servers, storage, networks and security.

Managed Backups

365 Data Centers leverages its experienced team of cloud architects and robust cloud infrastructure to provide cloud backups for your business's mission-critical data.

With full system management and military-grade encryption, your data will be kept secure, and in the case of a disaster or component failure your data can be recovered quickly and easily.

Disaster Recovery

365 Data Centers replicates your data to one of our 20 Internet data centers, with rapid failover and recovery in the case of a disaster.

We also work with you to develop a comprehensive, custom-built strategy, designed to facilitate rapid recovery of IT operations following a disaster.

Storage

365 Data Centers' Storage solution allows you to easily store and retrieve files in the cloud. This delivers seamless scalability, data geodiversity, and the ability to minimize capital expenses.

This solution can be leveraged for general off-site storage or in combination with our disaster recovery or backups services.

To find out how integrated Colocation, Network Connectivity, Cloud Hosting and Managed Services can help you your achieve business goals and IT initiatives, contactour 365 Data Centers today.
